First I am not a parent of BVSD but while at a park that is close to Louisville Elementary School I came across something that just upset me. I use to work in a local school district in the administration side so I am very aware of the challenges schools face inside the classroom and at the administration level when it comes to funding. I am also a parent of another school district who has done a great job communicating about the drastic cuts all school districts face this next fiscal year. So when I came across a dumpster full of items that didn't look like it was worth being thrown away it just came across extremely wasteful. It bothered me but what made me send this email was when a group of kids came across the same conclusion I did and when they said "why do they teach us to recycle and reuse but throw this perfectly good thing in the trash " made me reach out. Their dad agreed with them and did make the comments that it did seem very wasteful. It is just sad and very wasteful considering the fiscal constraints we are all about to face.
